Quiet, powerful and simple.

Mow the lawn? Gladly!

You can now mow your lawn with even more ease and comfort with the new Rotak generation. Its new and improved design is a real eye-catcher and allows you to relax whilst using the lawnmower.

Thanks to Pro**Silence** technology, the new **Advanced** Rotak also operates more quietly than ever before. Even at full power. This means that your garden remains a place of calm and relaxation – something that will please the neighbours too.

Pro**Silence** technology

Reduced volume

A conventional lawnmower produces a noise level of around 96 decibels, which is comparable with the unpleasant noise of a circular saw. Thanks to Pro**Silence** technology, the noise level of the new **AdvancedRotak** is now only around 89 decibels – identical to a conventional vacuum cleaner. This reduces the volume perceived by the user by a massive 75% which makes mowing the lawn a completely new experience.

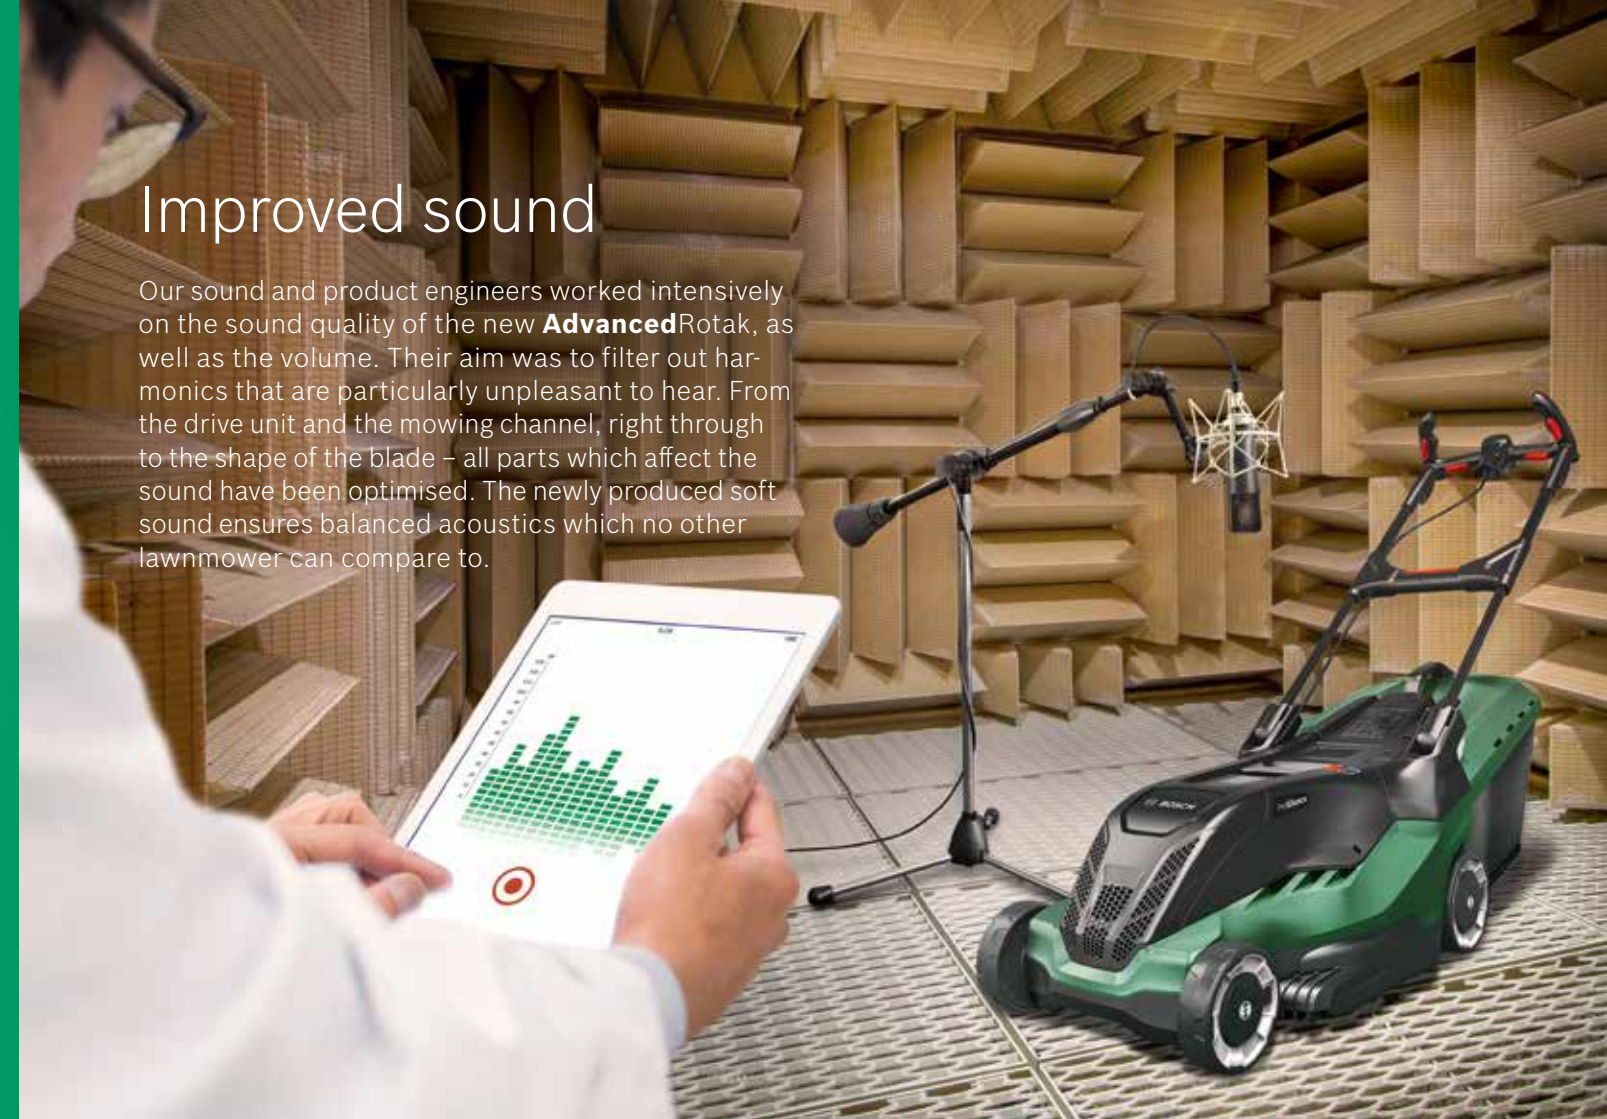

AdvancedRotak

75% Reduced perceived volume 89 dB(A)

Improved sound

Our sound and product engineers worked intensively on the sound quality of the new **AdvancedRotak**, as well as the volume. Their aim was to filter out harmonics that are particularly unpleasant to hear. From the drive unit and the mowing channel, right through to the shape of the blade – all parts which affect the sound have been optimised. The newly produced soft sound ensures balanced acoustics which no other lawnmower can compare to.

UniversalRotak

Making something great even better.

Our users always set the challenge to achieve this objective. From the intuitive height adjustment, to the foldable grass box, right up to the modern design. All solutions were questioned in order to make lawn mowing even more simple. The **Universal**Rotak is the next step in this evolution and the result of 15 years of continuous development.

With the **Advanced**Rotak, we are going one step even further and are taking a bold look into the future.

UniversalRotak

Cutting height adjustment

Mow the grass at the required height with just one click – the intuitive cutting height adjustment with six or seven settings makes it possible. Simply set the cutting level on the new Rotak and you can get mowing straight away.

UniversalRotak: 20–70 mm in six increments

AdvancedRotak: 20–80 mm in seven increments

Grass box

Quickly to set up and quickly to pack away again. The foldable grass box on the new Rotak saves you both time and additional work: The grass box indicator displays when the container is full. This means that the mown grass stays where it should – in the box and not on your shoes.

Grass combs

Grass combs ensure that your cut is perfect. The grass is optimally fed into the cutting area of the new Rotak, even close to edges – for a clean and precise finish. In addition, the blade with the LeafCollect edges helps to pick up leaves and send them to the grass box.

Leaf Collect

Wheels optimised for running

The wheels on the **Advanced**Rotak boast a special rubber coating. This ensures smooth running and a clean track when lawn mowing, which reduces vibrations and prevents the rolling bearings from turning out quickly.

Ergoflex handles

Everything under control. You can hold the Ergoflex handles in a truly natural way thanks to their ergonomically curved shape. This makes it possible to control the new Rotak with more ease and precision – and you can carry out the work with no strain.

ErgoSlide handles

The height is a question of attitude: The handles on the **Advanced**Rotak are not only ergonomically shaped, but are also height-adjustable and can be changed quickly and easily to suit you perfectly. This promotes a healthy posture that protects your back – for increased relaxation when mowing the lawn.
