# AMBROGIO: THE GREEN PERFORMER...

When Spring arrives, so many people dream of having a well looked lawn, without all the effort or worries. Lawns are outdoor areas to be lived to the full as party areas, Wi-Fi zones, play areas for kids and become an extension of the actual home.

It is in a scenario such as this that the robotic lawnmower Ambrogio by Zucchetti Centro Sistemi SpA completely excels.

On the market for 17 years, the Ambrogio robot is the ideal product for those searching for professionalism and excellence, combined with simple and innovative technology, Made in Italy guaranteed.

Ambrogio robot is the perfect ally for your everyday activities. It gives you TIME and FREEDOM to enjoy your garden and outdoor life to the fullest.

**The high technology and superior quality materials allow you to choose WHEN and HOW to enable the robot during the day, so that YOU can decide when to have your lawn free from hindrances and perfectly mown.**

The advantages also relate to its Quality: with the daily MULCHING by Ambrogio, the lawn grows thick and healthy with less need for fertilisers. In fact, the finely mown grass falls onto the ground to become a natural fertiliser for the lawn, boosting its health and beauty.

*Zucchetti Centro Sistemi,  
robot specialists  
for over 30 years*

THE ROBOTIC LAWNMOWER

## ... CHAMPION IN EFFICIENCY AND AUTONOMY

### *Powerful batteries*

With high capacity to guarantee longer lasting performance and longer work cycles. Lawns are managed more efficiently with no energy waste.

### *Evolved technology*

The advanced mowing systems and the evolved sensor feature combine to reduce work times, protecting the batteries, motors, blade and all the other robot components against excessive wear.

### *High resistance*

Ambrogio is made of materials that undergo stringent selection processes to guarantee resistance and a long working life. The main body and front wheels guarantee robustness and stability, even on uneven ground. The tempered stainless steel blade ensures accurate, precise and consistent cutting over time.

### *Free garden*

All of the above translates into a free garden for many consecutive hours during the day, to ensure enjoyment of outdoor life, with no hindrance or restrictions.

*Ambrogio robot is the perfect ally for those who love their garden and their leisure time. Being completely autonomous, discreet and efficient, it becomes the assistant that you'll soon find you can not do without.*

# TRADITIONAL CUT VS AMBROGIO ROBOT MULCHING CUT

Does the Ambrogio robot really cut?  
Will the grass on my lawn really be greener and lushier?  
Does the need for fertiliser and irrigation really decrease?  
Will I really save time to allow me to do other things?  
Will I also save money?

## TRADITIONAL CUT

Waste of time  
& Noise

Effort

Frequent  
fertilization

Pollution

Vs

## AMBROGIO ROBOT MULCHING CUT

- + ORGANIC NUTRIENTS
- + HYDRATION
- + RESISTANCE AGAINST DISEASES
- + GREEN LAWN

- IRRIGATIONS
- FERTILIZERS
- WASTED TIME
- POLLUTION

# AMBROGIO, FRIEND OF ANIMALS

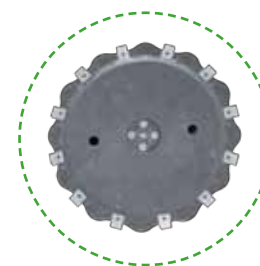

Ambrogio robot is sensitive to issues regarding the environment, the safety of persons and that of animals. Robotic lawnmowers were conceived to improve the quality of the grass on lawns and to simplify life for users, allowing them to save time and money. They are eco-friendly products that respect the environment because, unlike traditional lawnmowers or lawn-tractor, they do not pollute and are not noisy. They are equipped with blade guard, safety sensors, "push stop" button and comply with the most stringent safety standards imposed by the EU.

Among the exclusive accessories, Ambrogio also has a ZCS patented secure blade with intelligent grass cutter. And then, as in the case of all automatic tools, they must be used with due caution and amount of common sense. Ambrogio recommends a preliminary check of the area to be mowed (removing small objects), and remember that the robot is not a toy but rather a faithful garden friend. More often than not it is the operator who does not comply with the simple rules to avoid unpleasant incidents.

Fitted with long-lasting powerful batteries, Ambrogio does not need to work on repeated cycles day and night in order to mow the lawn: with careful programming, Ambrogio can rest all night (and part of the day), leaving the garden free when unsupervised and when little animals appear in search of food.

It is the advanced technology and superior quality materials used to produce Ambrogio that allow users to choose when and how to enable the robot; considering a medium size garden (up to 1,000 sqm) Ambrogio is able to cover the entire area with 4 - 7 hours a day of work. For the rest of the day (over 70%) Ambrogio simply rests. And not all robotic lawnmowers can boast such performance, so the user will need to enable it at night too (or in the rain! - not an efficient condition when striving to achieve a lush green lawn).

**The robot must therefore be managed as a tool that helps us in our day-to-day activities, even the most difficult and tiring tasks, with maximum care and improving the appearance of our garden due to the elimination of weeds.**

# SLOPES, NOTHING EASIER!

MANAGE  
SLOPES  
UP TO  
55%

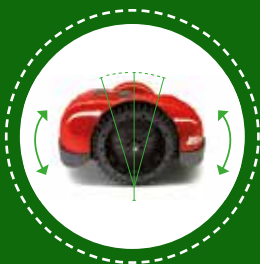

If your garden is on a slope, and you are not able to cut it with a traditional lawnmower or a lawn-tractor, Ambrogio robot is the solution for you! Ambrogio is a champion in handling slopes, even steeper and difficult kinds. All robots are able to handle slopes of up to 45% and up to 25% near the perimeter wire!

**In particular, Ambrogio L85 guarantees excellent mowing performance in gardens with slopes of up to 55%, also near the perimeter wire. THE HIGHEST VALUE ON THE MARKET.**

The bodywork and toothed wheels, combined with the powerful lithium ion batteries, are designed to mow the grass in all those green areas which are difficult to reach with standard tools.

# YOU SHOULD JOIN THE AMBROGIO ROBOT WORLD TOO!

Robotic lawnmowers first appeared on the market in the year 2000, but back then, and for some years to come, only a few hi-tech enthusiasts were willing to leave their traditional lawn-tractor or lawnmower in the cellar and switch to using a robot.

**IN 2016 over 400,000 robots were purchased in Europe (+38% compared to the previous year)\*. Technology increasingly at the service of man, to improve the quality of life of individuals and the wellbeing of the environment.**

You should join the Ambrogio robot world too, find your nearest Dealer to:

- Get advice on the robotic lawnmower that best suits your needs
- Install the perimeter wire and charging station
- Repair the robot if it breaks down
- Buy original spare parts for your Ambrogio robot
- Store the robot away for the winter
